Notes: Data are "point-in-time" monthly enrollment counts
Adult counts include all adults, including the disabled and elderly. States have been asked to separate out disabled children from their total child counts; disabled children are then included in total adult counts. However, due to the difficulty this raises in some states, it is possible that some disabled children are included in the non-disabled child count. Additionally, disabled children were not separated out of the child count in California.
