Totals Include Only States Reporting May Data	Combined (22 states)	28,512,937				29,928,754	1,415,817	5.0%
	Child (16 states)	10,161,603				10,563,920	402,317	4.0%

## METHODOLOGY

Sources of data are state websites. URLs are available upon request.

There are certain data limitations in this analysis due to the significant variability in how states report enrollment data. Where possible, we report total Medicaid enrollment for all ages and groups combined and total child enrollment in Medicaid separately. However, some states provide limited categories or do not clearly describe the populations included in their reports. For example, states may report adults, children, and aged, blind and disability as three categories but it is not clear whether children who are blind and disabled are included in the count for children or in the disabled group. Other states may show more detailed categories. For example, a state may report children enrolled as SSI eligible (disabled or blind) or as a dual eligible (Medicare and Medicaid), in which case, they are included in the child count.

Classifying 19-20 year-olds can be difficult. If a state is a non-expansion state and reports 19-20 year old enrollment data, the counts are included under child enrollment. If a state is an expansion state and we are able to confirm that the state has elected to cover 19-20 year-olds as children in its state plan, we include them in the child count. If we are unable to confirm if an expansion state has elected to cover 19-20 year-olds in children's Medicaid, 19-20 year-olds are not included in the child count. Some states, like Indiana, show 19-20 year-olds under three groups, including their adult expansion population. In these cases, we include only 19-20 year-olds that are not part of the expansion group in the child count.

Some states only report enrollment in managed care plans; these states are identified in the endnotes.

The continuous eligibility and other maintenance of effort provisions in the Families First act applies to Medicaid and CHIP-funded Medicaid expansion children (known as M-CHIP) but not separate CHIP programs (35 states). We do not include enrollment from separate CHIP programs in either the combined or child counts unless the state includes CHIP data and does not report it separately. States child counts that include separate CHIP data are footnoted.

## ENDNOTES

<sup>1</sup> Arkansas posts data on the first and last day of each month. Last day enrollment is included in this analysis.

<sup>2</sup> Arizona reports enrollment data on a quarterly basis so we use January 2020 as the baseline.

<sup>3</sup> In Colorado, 19-20 year-olds are counted in the combined total as expansion adults.

<sup>4</sup> Illinois data are for managed care enrollment only.

<sup>5</sup> In Indiana, 19-20 year-olds in Hoosier Healthwise and Hoosier Care Connect are included in the child count. 19-20 year-olds in the Healthy Indiana Plan expansion adults are not included in the child count.

<sup>6</sup> In Maryland, 19-20 year-olds are included in the child count.

<sup>7</sup> Minnesota's data are for managed care enrollment only.

<sup>8</sup> New York's data are for managed care enrollment only.

<sup>9</sup> Oregon's child enrollment data include children not eligible for federal match due to immigration status.

<sup>10</sup> Washington includes Title XXI/CHIP kids in its enrollment data for combined total and child enrollment.

<sup>11</sup> West Virginia's data are for managed care enrollment only.
