

## Uninsured Rates for Latino Children Vary Across California

In California, the uninsured rate for children overall is lower than the national average (3.1% vs. 5.2%). Nevertheless, Latino children in California are still almost 1.5 times more likely to be uninsured than other children in the state (3.7% vs. 2.5%). Counties and Congressional districts with large Latino child populations are more likely to have large numbers of uninsured Latino children, but state and local policies have an impact on the coverage rates. In California, Districts 16 (Fresno) and 32 (Norwalk) have the lowest Latino child uninsured rate at 2.6%, whereas 6.4% of Latino children are uninsured in District 35 (Pomona). Improving culturally and linguistically competent outreach in areas with high uninsured rates could help reach more Latino children.

### Latino child uninsured rate by Congressional District, 2018

## Number & Rate of Uninsured Latino Children by Congressional District in California, 2018

Congressional District (Geographic Reference Point)	Number of Uninsured Latino Children, 2018	Uninsured Rate of Latino Children, 2018
