

Uninsured Rates for Latino Children Vary Across Georgia

In Georgia, the uninsured rate for children overall is higher than the national average (8.1% vs. 5.2%). Additionally, Latino children are 2.5 times as likely to be uninsured than other children in the state (16.5% vs. 6.6%). Counties and Congressional districts with large Latino child populations are more likely to have large numbers of uninsured Latino children, but state and local policies have an impact on the coverage rates. In Georgia, District 4 (Lithonia) has the lowest Latino child uninsured rate at 11.9%, whereas 27.5% of Latino children are uninsured in District 6 (Marietta). Improving culturally and linguistically competent outreach in areas with high uninsured rates could help reach more Latino children.

Latino child uninsured rate by Congressional District, 2018

Number & Rate of Uninsured Latino Children by Congressional District in Georgia, 2018

Congressional District (Geographic Reference Point)	Number of Uninsured Latino Children, 2018	Uninsured Rate of Latino Children, 2018
